DETAILED ACTION

Allowable Subject Matter

Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for protecting code ROM data from being plagiarized by a third party during testing of the code ROM. Independent claim 1 identifies the uniquely distinct features of "a second encryption means for encrypting a test enable signal based on key data to generate a read enable signal; and an output means for dumping out the encrypted data outputted from the first encryption means in response to the read enable signal outputted from the second encryption means, while independent claim 11, identifies the uniquely distinct features of "a MISR unit for inputting, and compressing key data in synchronization with the clock signal in response to the test enable signal, an initializing means for providing an initialization value to the MISR unit in response to the test enable signal and the reset signal, a comparison unit for outputting a read enable signal by comparing value outputted from the MISR unit with an expected value; and an output means for dumping the code ROM data in response to a the read enable signal. The closest prior art, Broseghini (U.S. patent 5,416,783) and Fleischman (U.S. patent 6,321,320), both disclose conventional apparatuses for protecting data within a memory element during a testing sequence, however, each fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
